

# Instructions for the House Box kit

There are 3 pieces that make up the inner part of the kit as shown to the left. These layer up and glue together as shown on the right.

It is easier to decorate the pieces before you glue them together.

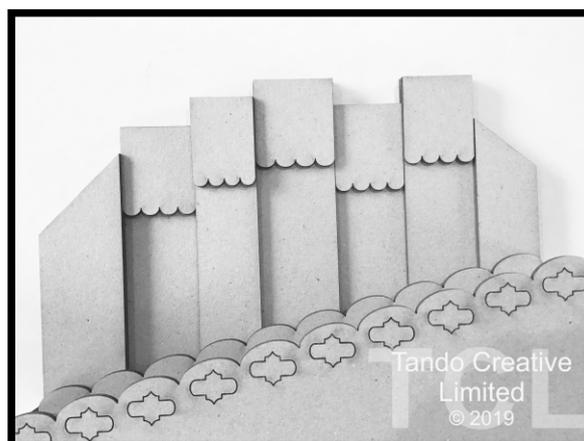

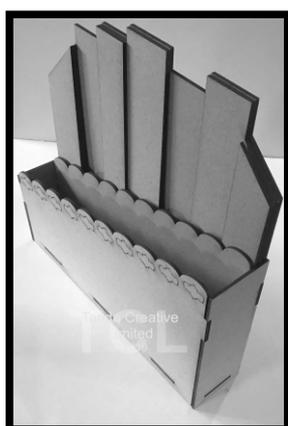

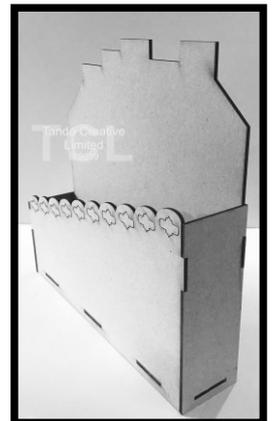

Use a good quality PVA glue.

Decorate the 5 outer pieces. To construct, glue the base in first, then the 2 side panels as shown on the left.

The front panel can then be glued into place.

The shapes on the front pop out if desired.

The inner panels will then slide into the box and can be glued.

The roof panels are different widths to suit the houses and can be decorated and glued on.
